Problem statement:

As our community is divided into class system, so we are targeting middle class families and Elite class to some extent. When there are more than one family in a house then it is hard to keep the track of expenses which is the main reason where our joint family system collapse.

Project Description:

To solve this real-world problem, we will introduce our Web System which will work as a bond between family members and will have following major functionalities.

- Home registration
- User registration
- Roles management
- Role based Task management
- Task Assignment
- Personal expense management
- Monthly Report Summary

Tools/Technologies:

- Backend: NodeJS / ExpressJS
- Frontend: ReactJS
- Database: MongoDB
